FOR IMMEDIATE RELEASE

Autovalid becomes part of Movement Software, strengthening its Vehicle Digital Solutions offering with mission-critical glass identification

Autovalid, the European specialist in vehicle glass identification, joins one of Northern Europe's fastest-growing niche B2B software groups. Autovalid retains its brand, team and platform while gaining the investment and expertise of a group comprising more than 25 software companies, with a dedicated focus on Vehicle Digital Solutions.

Oslo, Norway / Gothenburg, Sweden – 18 November 2026 – Movement Software, the Northern European group of more than 25 niche software companies across Transportation & Logistics, Vehicle Digital Solutions and Public Mobility, today announces the acquisition of Autovalid, the leading platform for vehicle glass identification and calibration information. The acquisition adds a mission-critical data platform for the glass replacement industry to the group and extends Movement's reach to glass repair networks in more than 35 countries.

Replacing a windscreen sounds simple until you see the options. A single car model can have more than 40 different windscreen variants, depending on sensors, cameras, heating and trim. Autovalid's platform gives workshops, wholesalers and glass suppliers precise glass identification and calibration information for each vehicle, so the right part is ordered and fitted the first time. Fewer purchasing mistakes, fewer returns and less time off the road mean higher customer satisfaction, lower costs and a smaller CO2 footprint. Founded in Norway in 2016, Autovalid today handles millions of lookups a year and serves leading glass replacement groups and glass manufacturers across Europe and beyond.

Vehicle Digital Solutions builds software for every stage of the vehicle lifecycle, from the showroom to the scrapyard. Glass replacement is one of the most frequent repairs a vehicle goes through, and Autovalid connects directly with capabilities already in the business area. These include automotive parts and cross-reference data, vehicle data services, and AI-powered claims handling for insurers and repair shops. Together they create practical synergies from day one and a clear path into the insurance segment.

Autovalid will continue to operate under its own brand, with the same team, platform and service its customers know, while gaining access to the investment, expertise and shared platforms of the wider Movement group. For Autovalid customers, this means continuity from the people and support they know, and greater capacity to invest in data

coverage, integrations and new capabilities. In the other direction, Autovalid's international glass network opens new markets for Movement's vehicle solutions.

> *"Autovalid is a great example of what we look for in Vehicle Digital Solutions: a focused team that has built a leading position in its niche. Identifying the right glass is where every replacement job begins, and that links naturally to the parts data, vehicle data and claims expertise we already have in the group.*
>
> *"Our first priority is to keep strengthening what Autovalid delivers to its existing customers every day. From that base, we will take the platform into more markets, together with the rest of our Vehicle Digital Solutions portfolio."*
>
> **Rickard Ahlbom** – Business Area Director Vehicle Digital Solutions, Movement Software
>
> *"We started Autovalid with a simple goal: help our customers order the right glass, every time. Movement Software gives us the backing to pursue that goal on a much bigger scale, and our customers keep the team and the platform they know.*
>
> *"At the same time, we gain long-term owners who understand both niche software and the vehicle aftermarket, and colleagues across the group to learn from and build with. It's the right home for the next chapter of Autovalid."*
>
> **Christian Haakaas and Hallvar Dehli** – Founders, Autovalid

---

About Autovalid

Autovalid is the leading platform for glass identification and calibration information for the vehicle glass and windscreen replacement industry. Founded in Norway in 2016, it serves workshops, wholesalers and glass suppliers in more than 35 countries.

Autovalid's proprietary database helps customers choose the right glass for each vehicle from a large number of options, reducing costly purchasing mistakes, returns and delays. Autovalid is headquartered in Oslo, Norway, with its development and operations team in Poland.
